Our Complete Planning Service

Changes and additions after the completion of the building are costly, and in a great many instances impair the architectural symmetry of the design. Therefore, it is the function of our planning service to guide you around these obstacles to a perfectly satisfactory home, and make certain that all your ideas are included in the original working drawings, and that the home is planned to comfortably accommodate your particular family.

Further, it is our aim to obtain for you a full dollar's value in your home for EVERY dollar expended. Careful consideration must be given to the type of house you build, and to the site, for time spent prior to construction with our expert advisors determining these and other details, will, in future years, pay immeasurable dividends in comfort, security and convenience.

(OVER)

OUR COMPLETE PLANNING SERVICE

NEIGHBORHOOD:

Your site should be chosen with a view toward the probable future character of the neighborhood. If possible try to place your new home in a restricted area. Grading, drainage and other features which will affect future cost must be carefully considered in choosing your lot.

Study your site to determine placement of the house. Consider your home not only from a standpoint of beauty, but also to receive the most benefit from natural elements, trees all ready on the premises, sunlight, etc.

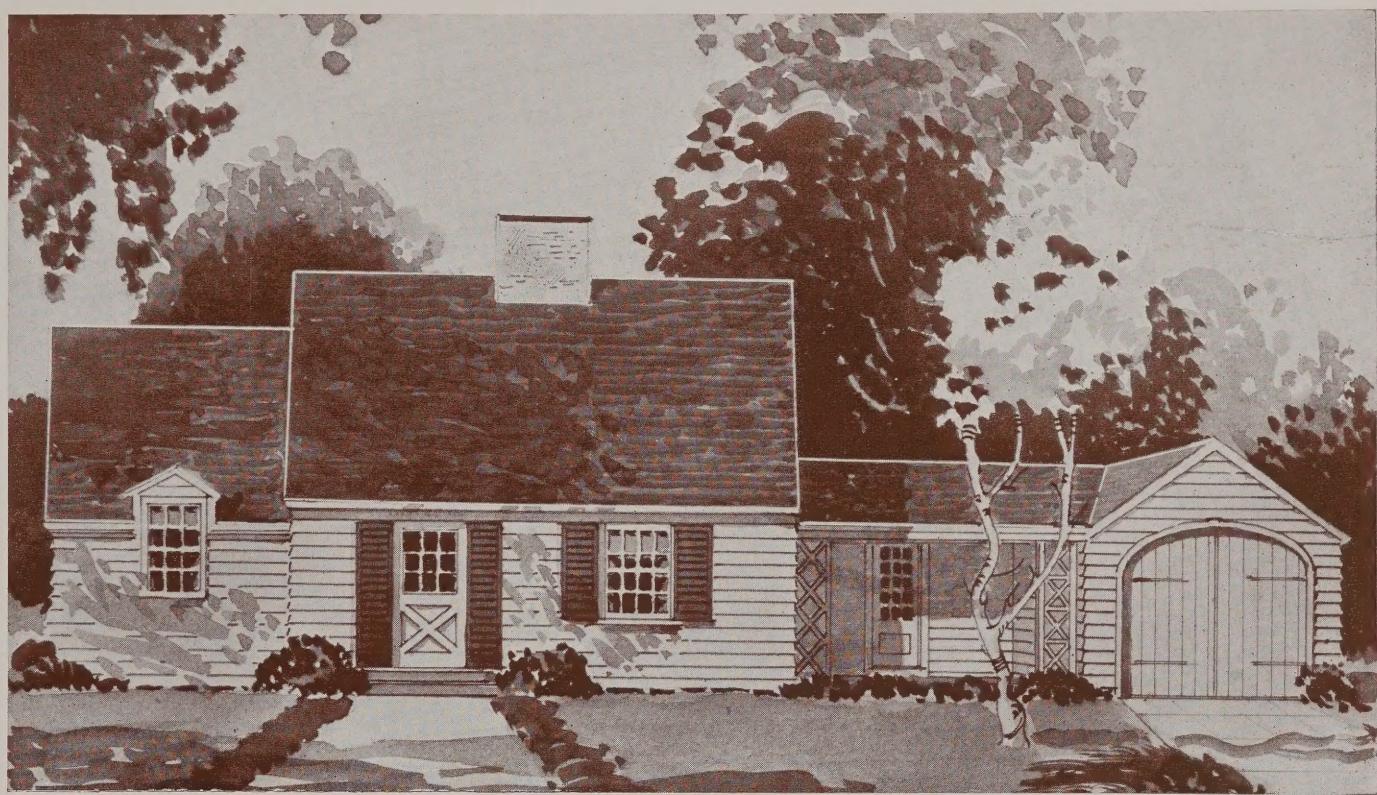

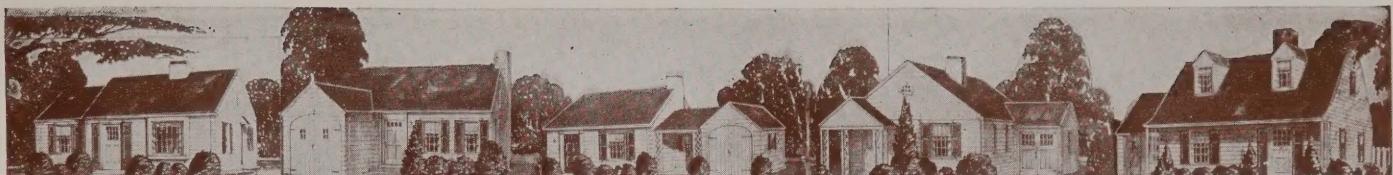

The design of your home should fit in perfectly with the other houses in the neighborhood which you have chosen for your new home. Also, it should be of design not quickly outmoded, and built throughout of only first grade materials of proven merit.

For those who wish financing the Federal Housing Administration and dependable building and loan companies and banks are granting long term mortgages at low rates of interest.

In preparing the plans illustrated herein, present day conditions were thoroughly considered. The specifications for the modern home should be: proper exposure, convenience in layout, compact kitchen, few halls, neat trim, comfortable stairs, plenty of stair head room, many light outlets at convenient locations, heating comfort, good framing, fire protection, windows at proper height from floor, air-tight walls and insulation.

To be in conformity with general taste, homes of wood, brick, and brick veneer in different stylings have been included, with each design having its individual features. No detail has been overlooked to assure you practicability, comfort and convenience.

There is no better time to build than the present. Never before have the carpenter and other workmen given as much time and careful attention to the work of construction. From the original service to you, to the final coat of paint your home will be given better service than heretofore, and you will appreciate these advantages only when you are settled in your new home.
